

Afrimat – 1H FY22 Results

Date: 05 November 2021

Its about Volumes Not Prices

Key message: Iron ore prices have retreated significantly, but we still forecast revenue in FY24 to be 2.4 times that in FY21 due to volume growth in existing and new mines.

- Afrimat released 1H FY22 results, with HEPS up 60.5% to 295.1c off an increase in revenue and operating profit of 55% and 65% respectively. An interim dividend of 40c was declared.
- While high iron ore prices boosted the result (lump ore up over 50%), the investment case for Afrimat continues to be the strong volume growth they are set to realise over the next three years.
- **Iron Ore:** The Jenkins mine has started to contribute and should deliver 650kt to AMSA in the year to June 2022. Production will then increase to 1.25mtpa. Mining costs at Jenkins are lower than Demaneng as it is direct shipping ore (DSO) with minimal beneficiation. With Demaneng continuing to export 875ktpa the iron ore business will more than double over the next 12 months. Mining costs increased as stripping ratios were raised while iron prices were high (management intentionally took the opportunity) – these should reduce now that iron ore prices have moderated.
- **Anthracite:** The Nkomati mine has experienced a strong turnaround and has been profitable from August 2021. After a large operating loss in this period, we expect a recovery to just over breakeven by year end. Anthracite prices are set annually in ZAR and are not linked to international prices.
- **Manganese:** The Gravenhage mine is set to start to produce in early FY24 (all approval obtained end FY22, development FY23). A more conservative mine plan is in place with a 750ktpa mine envisaged initially, bringing down the anticipated capital cost by approx. R500m to R1.1-1.4bn.
- Peak funding for all the above operations is approx. US\$45m (Gravenhage purchase price) and R760m mine development costs. The recent high iron ore prices have reduced the maximum net debt required to R500-600m. At commodity prices lower than current spot rates Afrimat could increase revenues by 2.4 times between FY21 and FY24, with all capital fully funded by internal cashflows.
- This increases our Sum-of-the-Parts valuation to R88 (from R81).

Financial summary

Valuation

- We value Afrimat using a Sum-of-the-Parts methodology. We value the iron ore assets (Demaneng and Jenkins) using a DCF for the life-of-mine. We have added a valuation for the Nkomati anthracite and Gravenhage manganese mines.
- Our base year for EBITDA multiples is FY23.

Figure 2 Sum-of-the-Parts Valuation – FY23 EBITDA (Base Case)

ZARm	Multiple range	Comment	FY23 EBITDA	EV/EBITDA Multiple	Enterprise Value
Construction Materials	4-6x	Mid range multiple	379	5.0x	1,896
Iron ore		DCF @ WACC (12.8%)			6,334
Manganese		DCF @ 20% (pre-development)			2,446
Anthracite - Nkomati		DCF @ 20% (difficult seam conditions)			1,562
Industrial Minerals	4-6x	Mid range multiple	169	4.0x	675
					12,914
Other assets		From balance sheet			85
Minorities		From balance sheet			-8

Equity value					12,481
Number of shares ('m)					142,496
Valuation (ZAR per share)					87.59

Source: Company data, Chronux Research estimates

Construction Materials

- We use a 5 times EBITDA multiple to value this division. This is in line with how we value comparable company Raubex – the two companies have similar construction materials businesses with significant regional footprints.
- Losses in Mozambique totalled approx. R28m (operational losses and depreciation). The moveable capital items have been extracted.
- The W Cape was slow in July/August 2021 due to bad weather.
- The division is still trading at levels lower than FY19/FY20. We do expect margins to recover after the Mozambique losses.

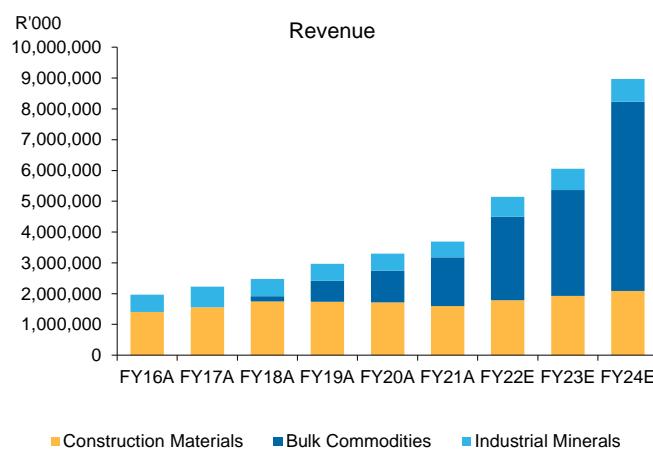

Bulk Commodities

- We value the iron ore operation (Demaneng and Jenkins) using a DCF methodology.
- The Coza acquisition does allow for an extension of the LOM for iron ore exports from 10 years to +20 years (Coza should extend the LOM by more than 20 years). We have included this in our iron ore valuation.
- We now factor in the sale of 1.25mtpa of direct shipping ore (minimal processing required) to AMSA as a boost to earnings, with margins/t expected to be similar to export margins (AMSA will buy the product on an export parity pricing model).
- Sales from the iron ore division will more than double as a result at a similar profit margin. The Coza acquisition provides more than 20 years of reserves for this expanded production – the iron ore division has moved from a limited-life small mine to a significant operation with reserves to maintain production for 30-40 years.
- We have added a valuation for Nkomati Anthracite – we use a high 20% discount rate for the DCF valuation to account for the difficult seam conditions.

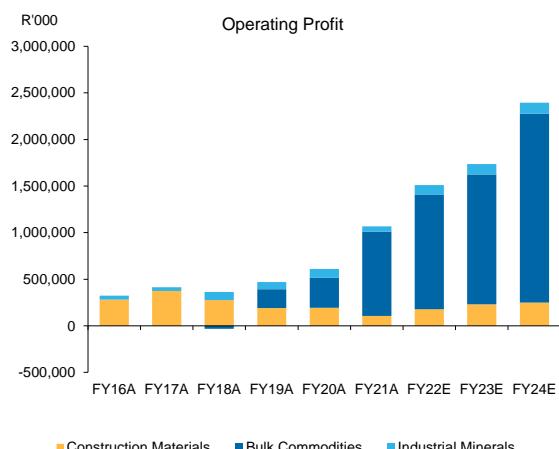

- Nkomati has turned profitable in August 2021, and we expect the full year to be just over breakeven (after a R108m loss in 1H). Afrimat has greatly improved the geological model of the mine and, although mining conditions remain difficult, better mine planning should result in steadier production.
- An underground expansion is planned in FY23 to maintain production volumes.
- The contribution from Gravenhage (manganese) comes in from FY24. We use a DCF valuation for the operation at a relatively high 20% discount rate to account for the development risk of bringing the project into operation.
- Outstanding conditions precedent to finalise the purchase of the deposit include the water use licence and Section 11 transfer of mining rights. Management believe that this could be in place by March 2022.
- The development of the mine will start when these conditions are met, and a development phase of 12 months is expected before first revenue. This is likely to occur only in FY24 at development cost of approx. R600m.
- The mine will initially produce 750ktpa and will ramp up to 1.5mtpa using internal cashflows.
- A purchase consideration of US\$30m is payable on the conditions being met, with a further US\$15m 12 months after the first revenue is produced.
- The Gravenhage deposit will produce oxide grade manganese ore, which trades at a premium to the normal carbonate ore. Demand is not expected to be a limiting factor.

Industrial Minerals

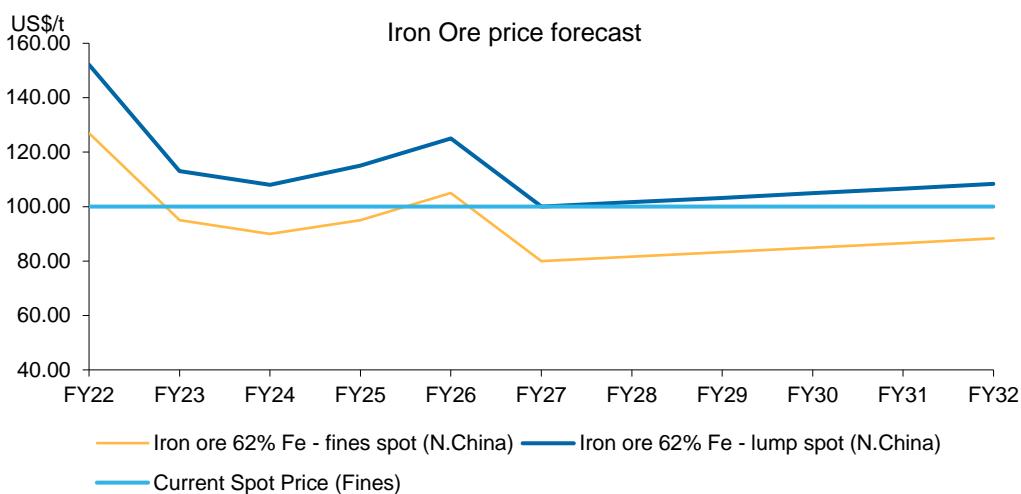

- We use a 4 times EBITDA multiple to value this division. Afrimat has well-placed quarries close to market with high-grade material.
- Margins are under pressure in this division as major customers have faced difficult financial conditions. An improvement in 2H is expected.

Sensitivity

- Our valuation is most sensitive to the iron ore price and currency – the most volatile variables for Afrimat. The following chart shows the AFT valuation sensitivity to the iron ore price.

Figure 7 Sensitivity to Iron Ore Prices

Source: Company data, Chronux Research

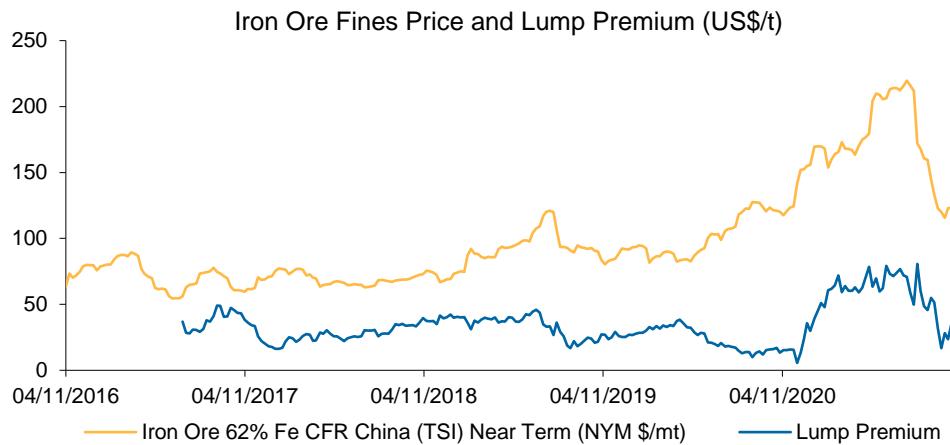

Coza Mining acquisition

- Afrimat has announced the acquisition of 100% of Coza Mining (Pty) Ltd for R300m. Coza owns adjacent properties to Demaneng with iron ore and manganese resources.
- The price paid works out to less than US\$1/ton direct shipping ore – with further resources still to be explored. Management have previously been wary of reserves for sale at around US1/ton, considering that too expensive (Demaneng was purchased at US\$0.33/ton).
- Coza has three iron ore projects that would be able to extend the life of the iron ore export operation of Demaneng, where reserves are limited, and the current mine life is approx. 10 years.
- Coza has reserves 20mt of high-quality direct shipping ore (minimal beneficiation required). This deposit is earmarked for sale to AMSA. Further deposits are present for the future extension of iron ore exports when the Demaneng deposit is exhausted. Management believe that the resources will extend the LOM for exporting iron ore by at least 20 years.
- Arcelor Mittal South Africa (AMSA) is part of the selling group and a sales agreement to AMSA has been negotiated. This entails AMSA purchasing 1.25mtpa of direct shipping ore. Margins per ton are expected to be similar to export margins (AMSA will buy the product on an export parity pricing model).
- The DMRE has granted mining rights for iron ore and manganese on the three farms involved in the transaction.
- Capital of R110m is expected to start mining operations.
- While separate mining operations would be established, the proximity of the Coza reserves would allow the relatively easy transfer of mining assets as new reserves are exploited. The processing plant on the Demaneng property would be used for ongoing mineral processing.

Iron Ore forecasts

- Iron ore prices and the lump premium have enjoyed a spike over the recent year, with prices pulling back sharply recently.

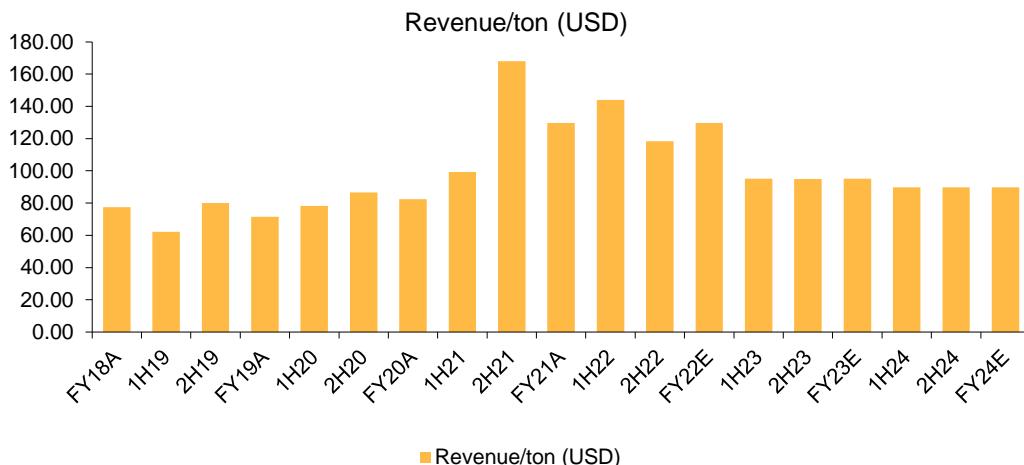

Figure 8 Iron Ore Price

Source: Company data, Chronux Research

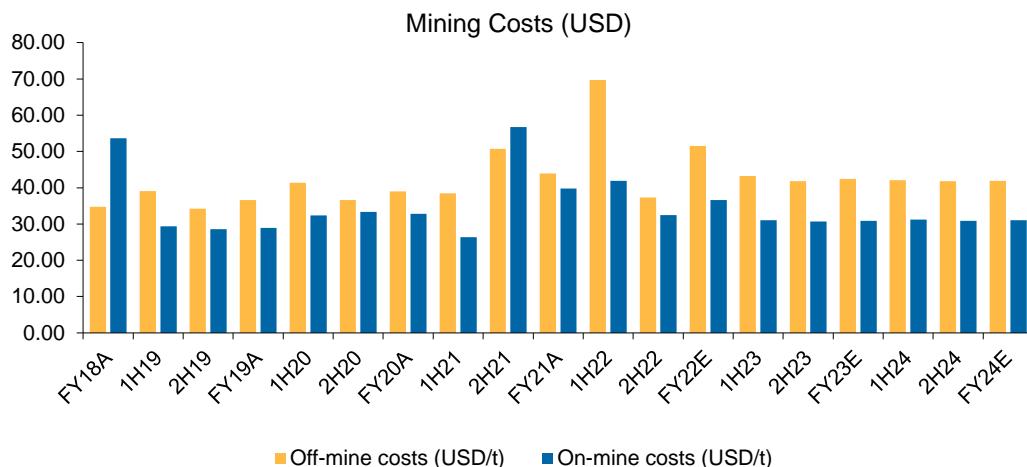

- The revenue per ton for the division has also experienced a spike. We do see iron ore prices settling to below USD100/t in the forecast period.

Figure 9 Revenue per Ton (USD)

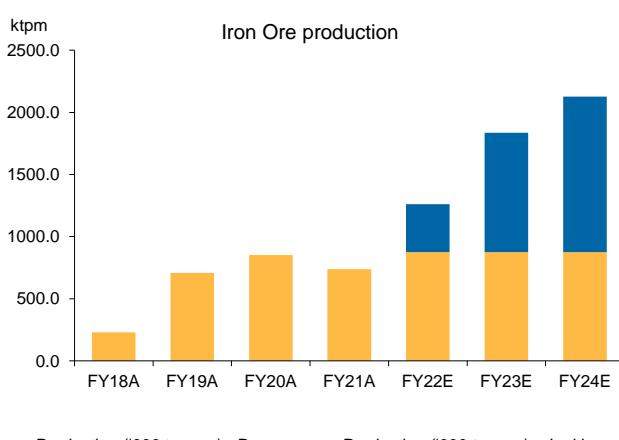

Source: Company data, Chronux Research

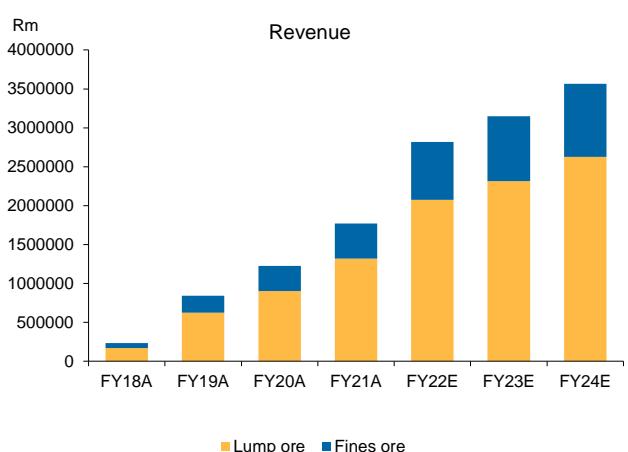

- Afrimat has used the opportunity to increase the stripping ratio while iron ore prices were very high and on-mine costs have increased as a result. We do expect the on-mine costs to return to historic levels now that iron ore prices have normalised.
- Off-mine costs also spiked in recent periods, mainly due to significantly increased freight rates.

Figure 10 Cost per Ton (USD)

Source: Company data, Chronux Research

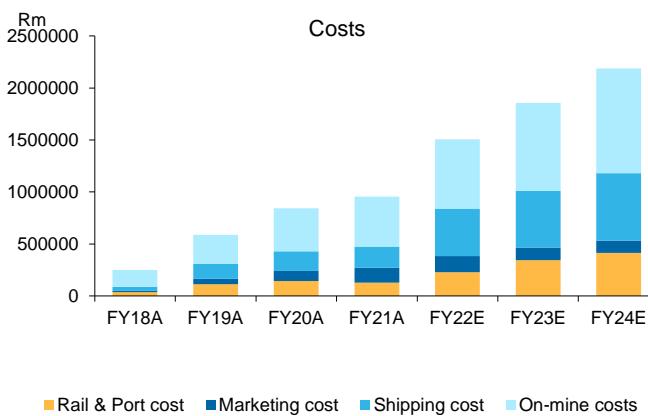

Figure 11 Iron Ore - Production

Source: Company data, Chronux Research

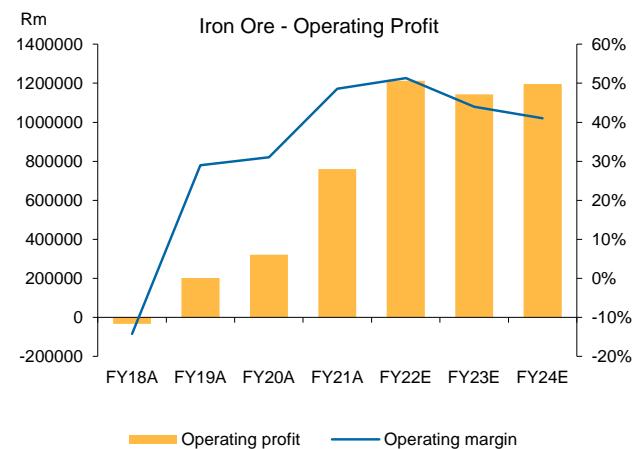

Figure 12 Iron Ore - Revenue

Source: Company data, Chronux Research

- Jenkins has come into operation and should ramp up to full production in FY24. This should result in continued revenue growth for the iron ore division for the next few years.

Nkomati

- Nkomati was purchased for an effective price of R350m (incl 250m of working capital - R170m for the open pit and R80m for the underground operation). R100m of capex remains to get the mine to full production, with R14m of this spent in 1H.
- The open pit mine requires overburden stripping to access reserves. The underground mine has collapsed, and a new decline shaft needs to be opened to access these reserves.
- The mine should be able to generate approx. R200-220m PAT. The payback period for the purchase could be as short as 2-3 years.

Source: Company data, Chronux Research estimates

- Nkomati mines high grade anthracite, which is in high demand from South Africa's ferro alloy producers. The ferrous metals producers are dependent upon high grade anthracite with low impurities, such as low volatile matter (<9%), low sulphur (<1.0%) and low phosphorus (<0.03%) to produce quality ferro steel and ferro chrome. Glencore is a key local customer, with anthracite prices set on an annual basis giving some stability to pricing. Current prices are approx. R1800/t.
- Nkomati's anthracite has the lowest sulphur impurities (<0.5%) of all anthracite producers in South Africa, while its phosphorus levels are on par (<0.03%) with the best producing mines. The combination of very low sulphur and phosphorous content of Nkomati's deposit makes it sought after and positions the mine as a key supplier to the local market.

Gravenhage acquisition

- Afrimat announced the acquisition of the Gravenhage manganese mining right in the Northern Cape (50km north of Hotazel). Afrimat has been looking at manganese for some time as it complements the bulk commodity mining business already established in the region.
- Gravenhage is an undeveloped long-life resource in the northern part of the Kalahari Manganese Field. A long legal battle delayed the award of a mining right for the deposit to seller Aquila Steel, with the Constitutional Court in February 2019 eventually upholding a High Court ruling to award the mining right to Aquila.
- The purchase price is US\$45m plus R15m for the property. A first tranche of US\$30m will be paid on fulfilment of the conditions precedent (key being section 11 transfer of mining right and Water Use License) plus R15m for the property purchase. A second tranche of US\$15m will be payable at the earlier of Afrimat diluting its mining right interest to less than 50% or 12 months after the first product is mined.
- A summary of the deposit can be found on the Aquila Resources website ([click here](#)). We include these details in this report.
- The project is viable using trucks to transport the ore as opposed to rail (rail R700/t and trucks R1000/t), although a rail option is being discussed with Transnet.
- Afrimat can fund the acquisition and development of the mine through existing cash flows and some debt – a capital raise is not necessarily required.
